DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 29, 2005 has been entered.

Claims 1, 8, and 12 have been amended. Claim 21 has been previously canceled. Claims 1-20 are now pending in this application.

Response to Amendment

2. Applicant's amendments to claims 1, 8, and 12 are acknowledged. The amendments are sufficient to overcome the 35 U.S.C. 102(e) rejection set forth in the previous Office Action. The previous 35 U.S.C. 102(e) rejection has been withdrawn; however, a new 35 U.S.C. 102(b) rejection is set forth below.

Claim Objections

3. Claims 1, 8 and 12 are objected to because of the following informalities: In the last limitation, the claims recite, said workflow plan *comprise*. The limitation should recite comprises or comprising in order to have subject-verb agreement.

Appropriate correction is required.

Application/Control Number: 10/689,610 Page 3

Art Unit: 3623

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-4, 6, 7, 12-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Flores et al. (U.S. 5,734,837).

As per claims 1 and 12, Flores et al. discloses a method and apparatus for creating a workflow process management application suitable for an organization, comprising:

- (a) creating on a computer system, a plurality of department objects (col. 37, lines 49-55; col. 38, lines 31-47; The workflow application builder allows objects to be created to model workflow processes. Departments are created as part of indicating the organizational roles/identities of users.);
- (b) creating, on said computer system, a plurality of resource objects, each resource object being associated with at least one of said department objects and a production resource of said organization (col. 38, lines 31-47; Identity, or resource, objects are created and associated with departments of an organization to indicate individuals responsible for certain roles.);
- (c) creating, on said computer system, a plurality of activity objects, each activity object being associated with at least one of said department objects and an activity of said organization (col. 8, lines 20-30; col. 38, line 65-col. 39, line 49; Process, or

Application/Control Number: 10/689,610

Art Unit: 3623

activity, objects are created to identify business processes. Each resource object is associated with a department and a business process.); and

(d) after steps (a), (b), and (c), and responsive to a command, automatically generating, by said computer system, said workflow process management application from said department objects, resource objects, and activity objects (col. 5, lines 11-12 and 52-57; col. 6, lines 11-20; item 119 in Figure 6; The workflow process management application is generated after the workflow objects/definitions have been created using the workflow application builder.);

wherein said workflow process management application, when executed by said computer, permits a user to enter, for each department, a workflow plan for said department, receive a workflow performed by departments of said organization, create a report comparing said workflow plan with said workflow performed (col. 6, lines 26-31; col. 9, lines 11-20; col. 11, lines 40-52; col. 71, lines 4-6; When a workflow process management application is generated, it provides a GUI for users to manage the particulars of a specific workflow plan and create status reports.); and

said workflow plan comprising a plurality of standards, each one of said standards inter-relating at least one activity object with at least one resource object as a function of time (col. 4, lines 10-23; col. 6, lines 46-55 and 62-64; col. 8, line 65-col. 9, line 4; Workflows have rules, or standards, that specify certain relationships between objects. The rules include conditions and cycle times.).

As per claims 2 and 13, Flores et al. discloses the method and apparatus of claims 1 and 12, wherein in said workflow process management application, said user

Art Unit: 3623

enters a workflow plan by creating relationships between said resource and activity objects for each department (col. 6, lines 39-45; Using the workflow process management application, a user may create relationships between resource objects and activity objects for an organization.).

As per claims 3 and 14, Flores et al. discloses the method and apparatus of claims 1 and 12, wherein said plurality of activity objects comprise a plurality of fixed activity objects and variable activity objects (col. 16, lines 27-30; col. 31, lines 43-48; Some objects are variable in that they can be changed, other objects are fixed, or read-only, in that they cannot be changed.).

As per claim 4, Flores et al. discloses the method of claim 1, further comprising: selecting from a group of templates, a selected template and after said selecting, automatically creating a plurality of department, resource, and activity objects associated with said selected template (col. 12, lines 64-67; col. 13, lines 14-16 and 32-34; Workflow templates are used to establish certain definitions, objects and conditions with a workflow.).

As per claim 6, Flores et al. discloses the method of claim 1, further comprising: creating, on said computer system, a plurality of objects related to groups, locations, and acuities, wherein said set of objects further comprises said plurality of objects related to groups, locations, and acuities (col. 38, lines 40-50; Identity objects include the location of a resource.).

As per claim 7, Flores et al. discloses the method of claim 6, wherein in said workflow process management application, said user enters a workflow plan by creating

Art Unit: 3623

relationships between said resource objects, activity objects, and objects related to groups, locations, and acuities (col. 6, lines 39-45; Figure 7; Using the workflow process management application, a user may create relationships between resource objects and activity objects for an organization.).

As per claim 15, Flores et al. discloses the method of claim 1, further comprising: displaying a page in a user interface, said page comprising:

a logo region, a menu region, including at least one menu item, a navigation region and a context sensitive area (col. 7, lines 49-66; col. 26, lines 56-59; col. 27, lines 5-15; The GUI displays a page that includes menus, navigation and context sensitive regions. The GUI may be a Microsoft Windows application, which has a logo region.).

As per claim 16, Flores et al. discloses the method of claim 15, wherein the objects created in said creating step are based on user events generated by a user interacting with said menu region, navigation region and context sensitive area (col. 7, lines 64-66; col. 26, line 56-col. 27, line 2; col. 27, lines 5-7; A user clicks on an area within the GUI to generate an event.).

As per claim 17, Flores et al. discloses the method of claim 15, wherein said context sensitive area includes a hierarchical control object for showing and hiding a list of hierarchical objects (col. 28, lines 1-3; col. 37, lines 40-43; Data objects have a hierarchy using classes and objects.).

As per claim 18, Flores et al. discloses the method of claim 17, wherein said hierarchical objects comprise at least one department of said organization (col. 37, lines 50-52; col. 38, lines 46-47; A department is associated with an identity object.).

As per claim 19, Flores et al. discloses the method of claim 17, wherein said application further permits said user to create a plurality of objects related to groups, locations, and acuities, said set of objects further comprises said plurality of objects related to groups, locations, and acuities, and said hierarchical objects comprise at least one location of said organization (col. 37, lines 49-55; col. 38, lines 40-50; Data objects have a hierarchy using classes and objects. Identity objects include the location of a resource.).

As per claim 20, Flores et al. discloses the method of claim 15, wherein said menu region comprise at least one of a menu item and a sub-menu (col. 7, lines 55-56; col. 27, lines 5-7; The system contains a menu region similar to that of a Microsoft . Windows application where the menu item contains a pull-down of sub-menu items.).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 5 and 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flores et al. (U.S. 5,734,837) as applied above.

As per claim 5, Flores et al. discloses the method of claim 4, as discussed above. Flores et al. does not expressly disclose the workflow management application being used for a hospital. However, the claimed invention indicating the workflow management application being used for a hospital is mere intended use. That the workflow management application is to be used in a hospital is irrelevant since the intended field of use does not change the overall functionality of the system. The intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963). Accordingly, at the time of the invention, it would have been obvious to a person of ordinary skill in the art to use the workflow management application of Flores et al. for managing the workflow of a hospital because Flores et al. creates workflow processes using object oriented design, where the objects can represent any type of organizational structure and resource, thus providing a flexible system for managing the workflow of various types of organizations, including hospitals.

As per claim 8, Flores et al. discloses a computer readable medium, comprising substantially similar steps as recited and analyzed above for claims 1 and 12. However, Flores et al. does not expressly disclose that the workflow application builder is web based. It is old and well known that the Internet, or web, provides global access to data. Thus, at the time of the invention, it would have been obvious to a person of ordinary skill in the art for the application of Flores et al. to be web based since doing so would allow the workflow designers to manage their business processes from any location, thus enhancing the application's accessibility and ease of use.

Application/Control Number: 10/689,610 Page 9

Art Unit: 3623

As per claim 9, Flores et al. discloses the computer readable medium of claim 8, wherein in said workflow process management application, said user enters a workflow plan by creating relationships between said resource and activity objects for each department (col. 6, lines 39-45; Figure 7; Using the workflow process management application, a user may create relationships between resource objects and activity objects for an organization.).

As per claim 10, Flores et al. discloses the computer readable medium of claim 8, wherein said application further permits said user to create a plurality of objects related to groups, locations, and acuities, and said set of objects further comprises said plurality of objects related to groups, locations, and acuities (col. 38, lines 40-50; Identity objects include the location of a resource.).

As per claim 11, Flores et al. discloses the computer readable medium of claim 8, wherein in said workflow process management application, said user enters a workflow plan by creating relationships between said resource objects, activity objects, and objects relating to groups, locations, and acuities (col. 6, lines 39-45; Figure 7; Using the workflow process management application, a user may create relationships between resource objects and activity objects for an organization.).

Response to Arguments

8. Applicant's arguments are moot in view of the new grounds of rejections.

Application/Control Number: 10/689,610 Page 10

Art Unit: 3623

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Davis et al. (U.S. 5,870,545) discusses a system for performing workflow processes;
- Du et al. (U.S. 5,826,239) discusses a workflow resource management system;
 and
- Aleia et al. (U.S. 5,991,733) discusses a system for managing workflow related to accounts receivable.
